- b) A in-memory snapshot of the leader.
- c) A read-only replica of the leader.
- d) A writable replica of the leader.

Answer: c

Question: 2

To satisfy the requirements of an upcoming compliance audit, a client must provide a record of all interactive commands run against a production application in the last six months. Which Heroku feature should an Architect recommend to help with this use case?

- a) Heroku Shield keystroke logging
- b) Dataclips
- c) Private Space Logging
- d) SSH tunneling using Heroku Exec

Answer: a

Question: 3

Heroku apps that handle callouts from Salesforce can be written in:

- a) Python
- b) Java, Scala, Clojure
- c) Node, js / JavaScript
- d) PHP
- e) All of these

Answer: e

Question: 4

An app uses a queue of worker dynos to perform complex image processing, but the worker dynos are occasionally running out of memory when performing the processing. All of their dynos are currently standard-1x dynos. What should an Architect recommend in this scenario?

- a) Add additional worker dynos.
- b) Break up the image processing across multiple dynos.
- c) Move the app to a Private Space.
- d) Change the type of dynos to standard-2x.

Answer: d

Question: 5

For which two use cases should an Architect recommend using Heroku Redis?

(Choose two.)

- a) Providing long-term data warehousing
- b) Adding jobs to a queue
- c) Providing a data cache layer
- d) Querying relational data

Answer: b, c

Question: 6

Which two statements describe characteristics of Private Space Logging?

(Choose two.)

- a) Log entries are forwarded as HTTPS POST requests.
- b) Log entries are collated and forwarded by Heroku's Logplex router.
- c) Log entries can be forwarded to up to three logging services.
- d) Log entries can be forwarded to only one logging service.

Answer: a, d

Question: 7

If an Organization member has the operator privilege on an app, that means the user can:

- a) Add a paid add-on
- b) Remove a member from the Organization account
- c) Deploy the app
- d) Transfer the app to someone else

Answer: a

Question: 8

When designing a Heroku application, which two approaches observe the Twelve-Factor methodology?

(Choose two.)

- a) On deployment, Heroku fetches and installs any dependencies that are missing according to the application's list of dependencies
- b) On startup, the application's source code fetches and installs any dependencies that are missing according to the application's list of dependencies.
- c) The application's database configuration is stored in the application's Profile
- d) The application's database configuration is stored in the application's config vars.

Answer: a, d

Question: 9

Dataclips allows a user to choose which datastore to query. Which type of datastore is supported?

- a) Any datastore, provided that you have the connection URL
- b) Heroku Postgres
- c) Heroku Redis
- d) Any datastore connected via Heroku Connect

Answer: b

Question: 10
