ASQ Certified Six Sigma Green Belt (CSSGB) Practice Test

CSSGB Syllabus:

Торіс	Details	
I. Overview:	I. Overview: Six Sigma and the Organization (11 Questions)	
A. Six Sigma and Organizational Goals	1. Value of Six Sigma - Recognize why organizations use Six Sigma, how they apply its philosophy and goals, and the evolution of Six Sigma from quality leaders such as Juran, Deming, Shewhart, Ishikawa, and others. (Understand)	
	2. Organizational goals and Six Sigma projects - Identify the linkages and supports that need to be established between a selected Six Sigma project and the organization's goals including SMART goals, and describe how process inputs, outputs, and feedback at all levels can influence the organization as a whole. (Understand)	
	3. Organizational drivers and metrics - Recognize key business drivers (profit, market share, customer satisfaction, efficiency, product differentiation, key performance indicators (KPIs)) for all types of organizations. Understand how key metrics and scorecards are developed and how they impact the entire organization. (Understand)	
B. Lean Principles in the Organization	1. Lean concepts - Define and describe lean concepts such as theory of constraints, value chain, flow, takt time, just-in-time (JIT), Gemba, spaghetti diagrams, and perfection. (Apply)	
	2. Value stream mapping - Use value stream mapping to identify value-added processes and steps or processes that produce waste, including excess inventory, unused space, test inspection, rework, transportation, and storage. (Understand)	
C. Design for Six Sigma (DfSS) Methodologies	1. Road maps for DfSS - Distinguish between DMADV (define, measure, analyze, design, verify) and IDOV (identify, design, optimize, verify), and recognize how they align with DMAIC. Describe how these methodologies are used for improving the end product or process during the design (DfSS) phase. Understand how verification and validation are used to compare results against stated goals. (Understand)	
	2. Basic failure mode and effects analysis (FMEA) - Use FMEA to evaluate a process or product and determine what might cause it to fail and the effects that failure could have. Identify and use scale criteria, calculate the risk priority number (RPN), and analyze the results. (Analyze)	

Topic	Details
	3. Design FMEA and process FMEA - Define and distinguish between these two uses of FMEA. (Apply)
	II. Define Phase (20 Questions)
A. Project Identification	Project selection Describe the project selection process and what factors should be considered in deciding whether to use the Six Sigma DMAIC methodology or another problem- solving process. (Understand)
	2. Process elementsDefine and describe process components and boundaries.Recognize how processes cross various functional areas and the challenges that result for process improvement efforts. (Analyze)
	3. BenchmarkingUnderstand various types of benchmarking, includingcompetitive, collaborative, and best practices. (Understand)
	4. Process input and outputs - Identify process input and output variables and evaluate their relationships using the supplier, input, process, output, customer (SIPOC) model. (Analyze)
	5. Owners and stakeholders - Identify the process owners and other stakeholders in a project. (Apply)
B. Voice of the Customer (VoC)	Customer identification Identify the internal and external customers of a project, and what effect the project will have on them. (Apply)
	2. Customer data - Collect feedback from customers using surveys, focus groups, interviews, and various forms of observation. Identify the key elements that make these tools effective. Review data collection questions to eliminate vagueness, ambiguity, and any unintended bias. (Apply)
	3. Customer requirements - Use quality function deployment (QFD), Critical to X (CTX when 'X' can be quality, cost, safety, etc.), Critical to Quality tree (CTQ), and Kano model to translate customer requirements statements into product features, performance measures, or opportunities for improvement. Use weighting methods as needed to amplify the importance and urgency of different kinds of input; telephone call vs. survey response; product complaint vs. expedited service request. (Apply)
C. Project Management Basics	Project methodology Define and apply agile and top- down project management methods. (Apply)

Topic	Details
	2. Project charterDefine and describe elements of a project charter and develop a problem statement that includes baseline data or current status to be improved and the project's goals. (Apply)
	3. Project scopeHelp define the scope of the project using process maps, Pareto charts, and other quality tools. (Apply)
	4. Project metrics - Help develop primary metrics (reduce defect levels by x-amount) and consequential metrics (the negative effects that making the planned improvement might cause). (Apply)
	5. Project planning tools - Use work breakdown structures (WBS), Gantt charts, critical path method (CPM), and program evaluation and review technique (PERT) charts, and toll-gate reviews to plan projects and monitor their progress. (Apply)
	6. Project documentation - Describe the types of data and input needed to document a project. Identify and help develop appropriate presentation tools (storyboards, spreadsheet summary of results) for phase reviews and management updates. (Apply)
	7. Project risk analysis and management - Describe the elements of a project risk analysis, including feasibility, potential impact, risk priority number (RPN), and risk management. Identify the potential effect risk can have on project goals and schedule, resources (materials and personnel), business continuity planning, costs and other financial measures, and stakeholders. (Understand)
	8. Project closure - Review with team members and sponsors the project objectives achieved in relation to the charter and ensure that documentation is completed and stored appropriately. Identify lessons learned and inform other parts of the organization about opportunities for improvement. (Apply)
D. Management and Planning Tools	- Define, select, and apply these tools: 1) affinity diagrams, 2) interrelationship digraphs, 3) tree diagrams, 4) prioritization matrices, 5) matrix diagrams, 6) process decision program charts (PDPC), 7) activity network diagrams, and 8) SWOT analysis. (Apply)
E. Business Results for Projects	1. Process performance - Calculate process performance metrics such as defects per unit (DPU), rolled throughput yield (RTY), cost of poor quality (CoPQ), defects per million opportunities (DPMO), sigma levels, and process capability indices. Track process performance measures to drive project decisions. (Analyze)

Topic	Details
	Communication Define and describe communication techniques used in organizations: top-down, bottom-up, and horizontal. (Apply)
F. Team Dynamics and Performance	1. Team stages and dynamics - Define and describe the stages of team evolution, including forming, storming, norming, performing, adjourning, and recognition. Identify and help resolve negative dynamics such as overbearing, dominant, or reluctant participants, the unquestioned acceptance of opinions as facts, groupthink, feuding, floundering, the rush to accomplishment, attribution, discounts, digressions, and tangents. (Understand)
	2. Team roles and responsibilities - Use tools such as RACI, to describe and define the roles and responsibilities of participants on six sigma and other teams, including black belt, master black belt, green belt, champion, executive, coach, facilitator, team member, sponsor, and process owner (Apply)
	3. Team tools and decision-making concepts - Define and apply team tools such as brainstorming, and decision-making concepts such as nominal group technique, and multivoting. (Apply)
	4. Team Communication - Identify and use appropriate communication methods (both within the team and from the team to various stakeholders) to report progress, conduct reviews, and support the overall success of the project. (Apply)
	III. Measure Phase (20 Questions)
A. Process Analysis and Documentation	- Develop process maps and review written procedures, work instructions, and flowcharts to identify any gaps or areas of the process that are misaligned. (Create)
B. Probability and Statistics	Basic probability concepts Describe and interpret basic probability concepts: independent events, mutually exclusive events, multiplication rules, permutations, and combinations. (Understand)
	2. Central limit theorem - Define the central limit theorem and describe its significance in relation to confidence intervals, hypothesis testing, and control charts. (Understand)
C. Statistical Distributions	- Define and describe various distributions as they apply to statistical process control and probability: normal, binomial, Poisson, chi square, Student's t, and F. (Understand)
D. Collecting and	Types of data and measurement scales Identify and classify continuous (variables) and discrete

Topic	Details
Summarizing Data	(attributes) data. Describe and define nominal, ordinal, interval, and ratio measurement scales. (Analyze)
	2. Sampling and data collection plans and methods - Define and apply various sampling methods (random and stratified) and data collection methods (check sheets and data coding). Prepare data collection plans that include gathering data and performing quality checks (e.g. minimum/maximum values, erroneous data, null values).(Apply)
	3. Descriptive statistics - Define, calculate, and interpret measures of dispersion and central tendency. Develop and interpret frequency distributions and cumulative frequency distributions. (Evaluate)
	4. Graphical methods - Construct and interpret diagrams and charts that are designed to communicate numerical analysis efficiently, including scatter diagrams, normal probability plots, histograms, stem-and-leaf plots, box-and-whisker plots. (Create)
E. Measurement System Analysis (MSA)	- Calculate, analyze, and interpret measurement system capability using gauge repeatability and reproducibility (GR&R) studies, measurement correlation, bias, linearity, percent agreement, and precision/tolerance (P/T). (Evaluate)
F. Process and Performance Capability	Process performance vs. process specifications Define and distinguish between natural process limits and specification limits, and calculate process performance metrics. (Evaluate)
	2. Process capability studiesDefine, describe, and conduct process capability studies, including identifying characteristics, specifications, and tolerances, and verifying stability and normality. (Evaluate)
	3. Process capability (Cp, Cpk) and process performance (Pp, Ppk) indices - Describe the relationship between these types of indices. Define, select, and calculate process capability and process performance. Describe when Cpm measures can be used. Calculate the sigma level of a process. (Evaluate)
	4. Short-term vs. long-term capability and sigma shift - Describe the assumptions and conventions that are appropriate to use when only short-term data are used. Identify and calculate the sigma shift that occurs when long- and short-term data are compared. (Evaluate)
	IV. Analyze Phase (18 Questions)
A. Exploratory Data Analysis	Multi-vari studies Select appropriate sampling plans to create multi-vari study

Торіс	Details
	charts and interpret the results for positional, cyclical, and temporal variation. (Create)
	2. Correlation and linear regression - Describe the difference between correlation and causation. Calculate the correlation coefficient and linear regression and interpret the results in terms of statistical significance (p-value). Use regression models for estimation and prediction. (Evaluate)
B. Hypothesis Testing	Basics Distinguish between statistical and practical significance. Determine appropriate sample sizes and develop tests for significance level, power, and type I and type II errors. (Apply)
	2. Tests for means, variances, and proportions - Conduct hypothesis tests to compare means, variances, and proportions (paired-comparison t-test, F-test, analysis of variance [ANOVA], chi square) and interpret the results. (Analyze)
C. Additional Analysis Methods	Gap analysis Analyze scenarios to identify performance gaps and compare current and future states using predefined metrics. (Analyze)
	 Root cause analysis Use cause and effect diagrams, relational matrices, 5 Whys, fault tree analysis, and other problem solving tools to identify the true cause of a problem. (Analyze)
	V. Improve Phase (16 Questions)
A. Design of Experiments (DoE)	1. Basic terms - Define and describe terms such as independent and dependent variables, factors and levels, responses, treatments, errors, repetition, blocks, randomization, effects, and replication. (Understand)
	DoE graphs and plots Interpret main effects analysis and interaction plots. (Apply)
B. Implementation Planning	- Apply implementation planning by using proof of concepts, try- storming, simulations, and pilot tests. (Apply)
C. Lean Tools	Waste elimination Select and apply tools and techniques for eliminating or preventing waste, including pull systems, kanban, 5S, standard work, and poka-yoke. (Apply)
	 Cycle-time reduction Use various techniques to reduce cycle time (continuous flow, setup reduction), single-minute exchange of dies (SMED). (Analyze)

Торіс	Details		
	3. Kaizen and kaizen blitzDefine and distinguish between these two methods and apply them in various situations. (Apply)		
	VI. Control Phase (15 Questions)		
A. Statistical Process Control (SPC)	1. SPC Basics - Describe the theory and objectives of SPC, including measuring and monitoring process performance for both continuous and discrete data. Define and distinguish between common and special cause variation and how these conditions can be deduced from control chart analysis. (Analyze)		
	Rational subgrouping Define and describe how rational subgrouping is used. (Understand)		
	3. Control charts - Identify, select, construct, and use control charts: X-R, X-s, individual and moving range (ImR or XmR), median, p, np, c, and u. (Apply)		
B. Sustain Improvements	Control plan Assist in developing and implementing a control plan to document and monitor the process. (Apply)		
	Document control Understand document control and its role in controlling and sustaining improvements. (Understand)		
	3. Training plans - Develop training plans to implement and sustain improvements. (Apply)		
	4. Audits - Define first-, second-, and third-party audits. (Remember)		
	5. Plan-do-check-act (PDCA) - Apply and distinguish between the steps of plan-do-check-act (PDCA) (Apply)		
C. Lean Tools for Process Control	Total productive maintenance (TPM) Define the elements of TPM, including use of predictive maintenance and describe how they can be used to control the improved process. (Understand)		
	2. Visual factoryDefine the elements of a visual factory (Andon, Jidoka) and describe how they can be used to control the improved process. (Understand)		

Broaden Your Knowledge with ASQ CSSGB Sample Questions:

Question: 1

Which of the following tools is used extensively in quality function deployment (QFD)? (Please choose the correct answer.)

- a) Affinity diagram
- b) Matrix diagram
- c) Cause and effect diagram
- d) Activity network diagram

Answer: b

Question: 2

Which of the following control charts is used to monitor discrete data? (Please choose the correct answer.)

- a) p
- b) I&mR
- c) X
- d) X and R

Answer: a

Question: 3

Which of the following tools is used to translate broad requirements into specific requirements? (Please choose the correct answer.)

- a) A quality control plan
- b) The theory of constraints (TOC)
- c) A critical to quality (CTQ) tree
- d) A process flowchart

Answer: c

Question: 4

When an inspection process rejects conforming product, what type of error is being made? (Please choose the correct answer.)

- a) α
- b) β
- c) σ
- d) H0

Answer: a

Question: 5

Positional, cyclical, and temporal variations are most commonly analyzed in (Please choose the correct answer.)

- a) SPC charts
- b) multi-vari charts
- c) cause and effect diagrams
- d) run charts

Answer: b

Question: 6

A measurement system analysis is designed to assess the statistical properties of (Please choose the correct answer.)

- a) gage variation
- b) process performance
- c) process stability
- d) engineering tolerances

Answer: a

Question: 7

Which of the following is an example of mistake-proofing? (Please choose the correct answer.)

- a) Using x and R chart to prevent errors
- b) Using 100% inspection to detect and contain defects
- c) Using color coding as an error signal
- d) Having the team that created the errors repair them

Answer: c

Question: 8

For a normal distribution, two standard deviations on each side of the mean would include what percentage of the total population? (Please choose the correct answer.)

- a) 68%
- b) 47%
- c) 34%
- d) 95%

Answer: d

Question: 9

Which of the following is a commonly accepted level for alpha risk? (Please choose the correct answer.)

- a) 0.05
- b) 0.50
- c) 0.70
- d) 0.95

Answer: a

Question: 10

Which of the following measures is used to show the ratio of defects to units? (Please choose the correct answer.)

- a) DPU
- b) DPO
- c) DPMO
- d) PPM

Answer: a

Avail the Study Guide to Pass ASQ CSSGB Six Sigma Green Belt Exam:

- Find out about the CSSGB syllabus topics. Visiting the official site offers an idea about the exam structure and other important study resources. Going through the syllabus topics help to plan the exam in an organized manner.
- Once you are done exploring the <u>CSSGB syllabus</u>, it is time to plan for studying and covering the syllabus topics from the core. Chalk out the best plan for yourself to cover each part of the syllabus in a hassle-free manner.
- A study schedule helps you to stay calm throughout your exam preparation. It should contain your materials and thoughts like study hours, number of topics for daily studying mentioned on it. The best bet to clear the exam is to follow your schedule rigorously.
- The candidate should not miss out on the scope to learn from the CSSGB training. Joining the ASQ provided training for CSSGB exam helps a candidate to strengthen his practical knowledge base from the certification.

- Learning about the probable questions and gaining knowledge regarding the exam structure helps a lot. Go through the <u>CSSGB sample</u> <u>questions</u> and boost your knowledge
- Make yourself a pro through online practicing the syllabus topics. CSSGB
 practice tests would guide you on your strengths and weaknesses
 regarding the syllabus topics. Through rigorous practicing, you can
 improve the weaker sections too. Learn well about time management
 during exam and become confident gradually with practice tests.

Career Benefits:

Passing the CSSGB exam, helps a candidate to prosper highly in his career. Having the certification on the resume adds to the candidate's benefit and helps to get the best opportunities.

Here Is the Trusted Practice Test for the CSSGB Certification

ProcessExam.Com is here with all the necessary details regarding the CSSGB exam. We provide authentic practice tests for the CSSGB exam. What do you gain from these practice tests? You get to experience the real exam-like questions made by industry experts and get a scope to improve your performance in the actual exam. Rely on ProcessExam.Com for rigorous, unlimited two-month attempts on the CSSGB practice tests, and gradually build your confidence. Rigorous practice made many aspirants successful and made their journey easy towards grabbing the ASQ Certified Six Sigma Green Belt (CSSGB).
