## Sample Questions:

### Question: 1

The Nexus Team has failed to meet the Nexus Sprint Goal for two sprints in a row. What are the possible reasons for this?

(Select two best answers)

- a) Nexus Integration Team is not coordinating the work among the developers
- b) Definition of Done has too stringent
- c) There is technical debt in the product
- d) Developers are struggling to integrate their work

**Answer: c, d**

### Question: 2

In a Nexus Sprint Review, the Stakeholders are not satisfied because the Integrated increment was not shown. Individuals showed all their individual Increments.

Which of the following options is / are true?

- a) The Stakeholders were not satisfied because the Nexus Goal was not met.
- b) Showing an integrated increment is needed during Nexus Sprint Review, for the Nexus Sprint Goal to be met.
- c) The Stakeholders were not satisfied because the right team of attendees might not be involved.
- d) None of the above.

**Answer: a, b**

### Question: 3

You are part of Team A which is working on requirement #3. Team B is working on Requirement #6 which is very similar to yours. Your team discovered a limitation which would make it impossible to implement requirement #3.

When and who should you inform?

- a) Bring it up in Nexus Sprint Retrospective
- b) Wait for Team B to discover the issue on their own
- c) Bring it up in Nexus Sprint Review
- d) Bring it up in Nexus Daily Scrum

**Answer: d**

**Question: 4**

What are two ways that Developers can ensure a good application architecture?

(choose the best two answers)

- a) Architecture is an ongoing discussion between Developers who are implementing current Sprint Backlog items.
- b) The Scrum Team uses a Sprint 0 to create infrastructure that will be needed later.
- c) The Developers focus only on adding functionality. The architecture will take care of itself as the Developers add functionality.
- d) The Developers have a set of guiding architecture principles that every Developer understands and follows when building the product.

**Answer: a, d**

**Question: 5**

A Nexus with five Scrum Teams has been created to build one product. Who has to coordinate the work with other teams in the Nexus?

- a) Nexus Integration Team, because they are responsible for cross-team dependencies
- b) Scrum Master should teach the Developers that it is their responsibility to work with other teams
- c) Lead Developer on a Team should coordinate with other teams
- d) Product Owner

**Answer: b**

**Question: 6**

What is the recommended number of teams per Nexus?

- a) 3 to 9
- b) 4 to 10
- c) 3 to 12
- d) 2 to 5

**Answer: a**

**Question: 7**

How does Nexus relate to Scrum?

- a) Nexus is an “Unit of development” and hardly relates to Scrum.
- b) Nexus is just a part of the Scrum framework.
- c) Nexus uses Scrum as its building block.
- d) Nexus and Scrum are two different frameworks addressing complex adaptive problems in different ways.

**Answer: c**

**Question: 8**

What factors should be considered when establishing the length of a Sprint?

(choose the best two answers)

- a) The risk of being disconnected from the stakeholders.
- b) The frequency at which team formation can be changed.
- c) All teams in a Nexus must have the same Sprint length.
- d) The level of uncertainty over the solution being developed.
- e) The Nexus Integration Team should determine the Sprint length for all individual Scrum Teams.

**Answer: a, d**

**Question: 9**

What are the responsibilities of the Nexus Integration Team?

- a) Coordinate, coach, and supervise the application of Nexus and the operation of Scrum so the best outcomes are derived.
- b) Do the work of delivering a potentially releasable Increment of “Done” product at the end of each Sprint.
- c) Maximize the value of the product and the work of the Developers.
- d) Ensure that the Product Backlog Items are visible, transparent, and clear to all.

**Answer: a**

**Question: 10**

The purpose of the Nexus Sprint Backlog is:

(choose the best two answers)

- a) To plan the product release.
- b) To visualize all Product Backlog items.
- c) To make dependencies transparent to the Scrum Teams.
- d) To provide a view of dependent Product Backlog items in a Sprint.

**Answer: c, d**
