IBM C1000-153 Sample Questions:

Question: 1

Cloud Pak for Security can be installed on Red Hat OpenShift version 4.8.14. Where can you download this version of OpenShift?

- a) From the Red Hat OpenShift mirror server
- b) From the IBM Customer Portal
- c) From the Red Hat Hybrid Cloud Console
- d) From the MyIBM Container Software Library

Answer: a

Question: 2

The Cloud Pak for Security admin notices an unusual amount of memory that is reported by their monitoring alarms. Upon further investigation, they run `oc adm top node` to get this output:

```
NAME CPU(cores) CPU% MEMORY(bytes) MEMORY%
master0.example.ibm.com 1122m 14% 7310Mi 50%
master1.example.ibm.com 980m 13% 8996Mi 61%
master2.example.ibm.com 1571m 20% 11771Mi 81%
worker0.example.ibm.com 4281m 27% 20344Mi 67%
worker1.example.ibm.com 2682m 17% 25512Mi 84%
worker2.example.ibm.com 3867m 24% 26629Mi 87%
```

What action needs to be taken to see what is using 81% of memory in the `master2.example.ibm.com` node?

- a) Use the `oc describe node` command to see the various pods that use memory on the node.
- b) List the nodes with `oc get pods` and map them to the node that uses the most memory.
- c) Log in to the console that hosts the nodes to see what resources are using the most memory.
- d) Use a third-party tool that can provide a detailed output of the resources that the node uses.

Answer: a
